

**DSCI 560 - Data Science Professional Practicum**  
**Lab 3 Part 1**

**Team name:** Cleanup Crew

**Team members:** Jonathan Kusuma (ID:4897950942), James Susanto (ID:3466104463)

**Minutes:**

**January 25:** We both tried to install the phpmyadmin but failed. After hours of searching for solutions, we were not able to figure out how to fix the 404 error from phpmyadmin

**January 26:** We both tried to edit the configuration files for apache and phpmyadmin to rectify the problem. We also tried researching on StackOverflow.

**January 27:** We tried to dual boot linux and run the installation again and we researched on possible alternatives to phpmyadmin

**January 28:** The installation was a success after editing the mysql password and other settings. Our Piazza post was never replied and we had to spend over 10 hours figuring out this issue.

**January 29:** Jonathan did the fetch tables functions and date ranges and James did the CLI prompts and portfolio management.

**January 30:** We worked together on completing the data preprocessing tasks and metrics. We also completed the video requirement.
